Searching a room to Stay

Apoorv Lokhande

Introduction/Business Problem

Often when a student shifts to a new city, he/she searches for a hostel/room to stay and generally ends with lots of choices or no choice at all. This project is focused on easing the problem of finding a right place (Probable area in the city) to stay for the student.

Data

Data used in this project will be taken from FourSquare.com API. The data will consists of information about the city (For instance, Indore (M.P) , India).

I will try to gather the information of the locations located around the student college and then will try to suggest the best area/location the student can stay using ML techniques.
